

Wind Management Plan

In the event of the wind becoming too strong and potentially dangerous to guests and the marquee, Marldon Marquees will inform all guests to leave the marquee, upon which time we will remove the roofs of the marquee to stabilise the pressure change between the inside and the outside of the structure, thus preventing it from being destroyed or blown over.

Snow Management Plan

Snow can add huge amounts of weight to a marquee; this could in certain cases cause the marquee to collapse.

This result can be reduced by removing snow from the marquees, heating the inside of the marquee to cause the snow to melt and not build up.

In the event of the snow build up becoming too much and potentially dangerous to guests and the marquee, Marldon Marquees will inform all guests to leave the marquee, upon which time we will remove the roofs of the marquee to stabilise designed weight loading, thus preventing it from being destroyed.

In certain cases your event might have to be cancelled
